What other thoughts might influence their behavior?

Carbon dioxide emissions are the primary driver of global climate change

Carbon dioxide(CO2) is an important heat-trapping gas, or greenhouse gas, that comes from the extraction and burning of fossil fuels(such as coal,oil and natural gas),from wildfires,and from natural processes like volcanic eruptions

we have to analyse region wise co2 emission on earth

we have to analyse country wise co2 emission on earth

To analyse global co2 emission across countries from 1975 to 2020

Carbond dioxide
emissions stemming
from the burning of
fossil fuels and the
manufacture
of cement;
they include CO2
produced during
consumption of solid,
liquid, and gas fuels as
well as gas flaring

we will be focusing on co2 emission and its effect on the world we live in as well as some key factors and stats that may play a role in the emission of co2 globally

This will help researchers and environment experts to predict global warming

countries
should set a
goal to
decrease this
amount yearly

Unearthing the environmental impact of human activity: A global co2 emission analysis

Globally, the primary sources of greenhouse gas emissions are electricity and heat (31%), agricultural (11%), transportation (15%), forestry (6%) and manufacturing (12%).

Human activities
have raised the
atmosohere's
carbon dioxide
content by 50% in
less than 200 year

There are many ways to reduce greenhouse gas emissions from the industerial sectors, inculding energy efficency, fuel switching, combined heat and power,..

Does

What behavior have we observed? What can we imagine them cong?
